1. Create a local directory, as described in the RT Wiki (CleanlyCustomizeRT):

```
mkdir -p /usr/local/share/request-tracker3.6/html/Elements
```

1. Copy your logo to the RT image directory:

```
cp iclogo.gif /usr/share/request-tracker3.6/html/NoAuth/images/
```

1. Adjust RT configuration:

```
Set($LogoLinkURL, 'http://www.icdevgroup.org/');  
Set($LogoImageURL, $WebPath . '/NoAuth/Images/iclogo.gif');  
Set($LogoAltText, 'Interchange');  
Set($LogoWidth, 163);  
Set($LogoHeight, 47);
```

1. Create new logo element in local directory (/usr/local/share/request-tracker3.6/html/Elements/Logo/):

```
<div id="logo"><a href="<%%$RT::LogoLinkURL%>">" width="<%%$RT::LogoWidth%>" height="<%%$RT::LogoHeight%>"  
border=0 /></a></div>
```
