

# Courier POP/IMAP and Essential SSL Certificates

Stefan Hornburg (Racke)

2008-03-16

1. Concatenate your private key and the certificate issued into a PEM file:

```
cat mail_linuxia_de.key mail_linuxia_de.crt > /etc/courier/imapd.pem
```

1. Copy the bundle file with the intermediate certificates into the configuration directory for Courier:

```
cp mail_linuxia_de.ca-bundle /etc/courier
```

1. Add the location of these files to the IMAP SSL configuration file, e.g. `/etc/courier/imapd-ssl`:

```
TLS_CERTFILE=/etc/courier/imapd.pem
```

```
TLS_TRUSTCERTS=/etc/courier/mail_linuxia_de.ca-bundle
```
