Tests

Warnings

Always use Test::Warnings to capture unexpected warnings in your tests.

```
use Test::Warnings;
```

Counting tests

```
use Test::More;
```

```
plan tests => 68;
```

Adjusting the test count every time you are adding tests is an unnecessary hassle, so just use *done_testing* at the end of your test script:

```
done_testing;
```

DateTime

Dates in filenames

Dates in filenames like `reports/2020-03-08.csv` should be in local time to avoid confusion.

```
my $tz = DateTime::TimeZone->new( name => 'local' );
my $now = DateTime->now;
$now->set_time_zone($tz);
```

DBIx::Class

Don't die

Use *throw_exception* instead:

```
$self->throw_exception("This is not a pending cia transaction")
    unless $self->is_pending_and_cia;
```
