

Pure-FTPd

Stefan Hornburg (Racke)

2007-07-02

Pure-FTPd on Debian uses a configuration file hierarchy below `/etc/pure-ftpd/conf`.
For example, to set the upload and download bandwidth to 2Mbit (=250 KB) per second,
create `/etc/pure-ftpd/conf/UserBandwidth` with the following values:

```
250:250
```

Restart Pure-FTPd. Please note that existing connections aren't affected by that change.
