**Collections API** **3**

**Field types** **5**

# Collections API

You can use the collections API only when you run Solr in Solr Cloud mode.  
Otherwise you get the following error message:

```
Solr instance is not running in SolrCloud mode
```

# Field types

The field types coming with Solr are documented here: [https://lucene.apache.org/solr/guide/8\\_3/field-types-](https://lucene.apache.org/solr/guide/8_3/field-types-)  
However the field types needed for the API are a single word, e.g.

**boolean** BoolField

**pdate** DatePointField

You can find the API field name for each field in your Solr installation at `server/solr/configsets/_default/conf/ma`
