

Status 400 from Dancer's before hook

Stefan Hornburg (Racke)

2012-10-09

Setting the HTTP status in Dancer's before hook with the status keyword doesn't work with the exception of 301 and 302 (redirects).

To solve this problem, you can define first a special route for setting the HTTP status:

```
get '/bad_request' => sub {  
  status 400;  
  return 'Bad request.';  
}
```

And advise Dancer to run this route from the before hook on a certain condition:

```
hook before => sub {  
  if (! param('customer_id')) {  
    request->path_info('/bad_request');  
  }  
}
```
